Amergent Techs (AT) has a proven track record assisting companies with **safety, security, navigation, environmental protection, and waterway solutions**. AT team members have assisted companies in radar and Vessel Traffic Management Systems, waterway management, regulatory compliance, preparation of Waterway Suitability Assessments for new LNG terminals, preparation of vessels for sinking as underwater habitats, orchestrated community and public meetings, and have extensive experience in command and control capabilities. AT has assisted in cargo security projects, emergency management, and developing systems to improve port operations. We know and understand today's security issues for ships, cargo, and terminal operations. Amergent Techs has a broad understanding of environmental compliance issues and the impacts on waterway users. We are familiar with environmental sensitivity and know these may become an issue in all waterway projects.
